CONFIDENTIAL 5 May 1958

SUBJECT: Visit to	
	on Portable Hydrogen Generator
1. On 29 April	1958 the undersigned met with
	of
	for the purpose of re-
viewing progress on th	ne portable hydrogen generator.
2. They had rur	five additional tests since the time of the
	ch were reported on in the monthly report for
March. The undersigned	d questioned them on the failure of some of the
	pecially with regard to generation time at various
catalyst concentration	
	ther that the number of tests were too small to
warrant any derinite o	enclusions. On the other hand, has been
the theoretical behavi	hose test results which did confirm their ideas on or of the generator and here also the number of
tests were small.	or or are generatar when nate grap fine unmat al
3. had	just completed three 1/10 scale runs with the gener-
	of temperature of 47°F at catalyst (CoCl2) concentra-
tions varying from 4.2	to 5.56 pounds. The tests were run with the
generator floating in	a tank of water (previous tests had all been run
with the generator res	ting on the floor) and a significantly lower final
temperature resulted d	ue to dissapation of heat through the fabric to the
	higher rate than on previous runs. The total
	se three runs varied from 34 to 59 minutes, the with the amount of catalyst used.
time varving inversely	"- " one mount of careful and.
4. As pointed o	ut during the last visit, the amount of catalyst re-
4. As pointed o quired is substantiall	y greater than was predicted at the end of Phase 1.
4. As pointed o quired is substantiall If the 1/10 scale gene	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst re-
4. As pointed o quired is substantiall If the 1/10 scale gene quired for the low tem	ration scales directly, the amount of catalyst re- perature (47°F) generation will be about 20 times
4. As pointed of quired is substantiall If the 1/10 scale gene quired for the low tempredicted (i.e., 50 lb signed, however, that	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times s. vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multi
4. As pointed of quired is substantiall If the 1/10 scale gene quired for the lew tempredicted (i.e., 50 lb signed, however, that ple of as much as 40 m	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times s. vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multight be expected. This fails to take into account
4. As pointed of quired is substantiall If the 1/10 scale gene quired for the lew tempredicted (i.e., 50 lb signed, however, that ple of as much as 40 m that the relative heat	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times so vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multight be expected. This fails to take into account dissapation from the full scale generator will be
4. As pointed of quired is substantiall. If the 1/10 scale gene quired for the low tempredicted (i.e., 50 lb signed, however, that ple of as much as 40 m that the relative heat less than in the 1/10	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times. S. vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multight be expected. This fails to take into account dissapation from the full scale generator will be scale runs (simply from surface area considerations)
4. As pointed of quired is substantiall If the 1/10 scale gene quired for the low tempredicted (i.e., 50 lb signed, however, that ple of as much as 40 m that the relative heat less than in the 1/10 and consequently the s	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times s. vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multight be expected. This fails to take into account dissapation from the full scale generator will be
4. As pointed of quired is substantiall If the 1/10 scale gene quired for the lew tempredicted (i.e., 50 lb signed, however, that ple of as much as 40 m that the relative heat less than in the 1/10 and consequently the suggests.	y greater than was predicted at the end of Phase 1. ration scales directly, the amount of catalyst reperature (47°F) generation will be about 20 times s. vs. 2.5 lbs.). It is the opinion of the underthe results will not scale directly and that a multight be expected. This fails to take into account dissapation from the full scale generator will be scale runs (simply from surface area considerations) caling up may not be as severe as the undersigned the heat dissapation experience of the generator when believes that a higher borohydride concensualler "pool" could be tolerated in the full scale # CORRECTION - ACCORDING TO CARREST STATES.

unit. To test out this hypothesis, however, would mean between 10 and 15 additional 1/10 and 1/5 scale tests which would cost about \$12,000 more (not including the cost of the borohydride -- which would amount to about \$5,000). Also, the full scale unit has already been ordered and a cancellation at this time would involve a forfeiture of a part of the price of the unit.

6. As it is, does not have su the Phase II program as described and estimat will be required to allow them to complete it This \$4500 estimate makes no allowance for po- generator for which contigency	t in a stisfactory manner.	-
asking \$1000 more. The undersigned has asked \$4500 extention proposal.	· · · · · · · · · · · · · · · · · · ·	
7. plans to run three more 1/various catalyst concentrations during May. by two 1/5 scale runs, one at 47°F, the other confirm the 1/10 scale test experience.	These will be followed up	1
